C

“Good design doesn’t start with design. It starts with alignment”
- Volta Studio

Is for *A*lignment

Alignment in design is the invisible, foundational force that creates order, structure, and visual harmony, turning chaotic elements into a cohesive, professional, and intentional layout. It goes beyond rigid, mathematical placement, requiring designers to trust their eye for ‘optical alignment’ to achieve true balance.

Is for *B*old

“If you make everything bold, nothing is bold”
- Art Webb

Bold is a typeface, line, or element that is significantly thicker and darker than the standard, or regular, weight. It is used to create visual hierarchy, demand attention, and highlight key information. Bold elements strengthen visual impact and improve readability, especially in branding, headlines, and user interface (UI) design.

“Creativity is nothing
but a mind set free”
- Torrie T. Asai

/s for *Creativity*

Creativity is the cognitive process of generating original, valuable, and functional ideas by combining existing knowledge and experiences in new ways. In design, it is essential for solving complex problems, fostering innovation, and creating unique, emotionally engaging user experiences. It transforms abstract concepts into tangible, purposeful solutions.

Is for

Design

“Design is thinking made visual”
- Saul Bass

Design is the strategic process of conceptualizing, planning, and creating solutions to resolve problems, satisfy needs, or improve experiences. It bridges functionality and aesthetics across diverse fields, from physical products and digital interfaces to services and systems aiming to transform existing situations into preferred ones.

Is for

Eyedropper Tool

“Color is the keyboard, the eyes
are the harmonies, the soul is the
piano with many strings”

- Wassily Kandinsky

The **Eyedropper Tool** is a digital color-sampling feature in design software (like Photoshop, Illustrator, and PowerPoint) used to select and copy a precise color from an image or object to use as the new active color. It changes the foreground/stroke color to match the clicked pixel's exact color, often activated by the letter 'I'. This tool is essential for designers to maintain color consistency, enabling accurate color matching, and speeding up workflows by sampling existing colors rather than creating them from scratch.

Is for

Feedback

“It's through mistakes that you
actually can grow. You have to
get bad in order to get good”

- Paula Scher

Feedback is a critical, iterative component of the design process, essential for refining work, aligning with goals, and creating user-centric solutions. It should be constructive, specific, and actionable, focusing on the work rather than personal opinions. Effective feedback loops involve early, regular input from peers and users.

“Working with the grid system means submitting to laws of universal validity” - Josef Müller-Brockmann

Is for *Grid*

A Design **Grid** is a foundational structure of intersecting horizontal and vertical lines used to arrange content consistently, improving readability, balance, and professionalism. It comprises margins, columns, and gutters to create visual harmony across print and digital media. Common types include manuscript, column, modular, and baseline grids.

Is for

Hierarchy

“Design is not subjective. Proportion, hierarchy, contrast—these are not opinions” - Massimo Vignelli

Hierarchy is the arrangement of elements in order of importance, guiding a user’s attention to key information first and improving content scanability. Key principles include using size, color, contrast, alignment, proximity, and white space to create a “hook” and a logical visual flow. This ensures intuitive navigation and interaction.

“The key to great ideas
is not having them, it is
executing them”
- Ben Fry

Is for

Inspiration

Inspiration in design is the crucial catalyst for innovation, driving original concepts, overcoming creative blocks, and enhancing emotional resonance with the audience. It acts as a compass, aligning project goals with creative execution, reducing mediocrity, and fostering the development of unique, functional solutions that stand out.

Is for

Justification

“Design is a plan for arranging
elements in such a way as best to
accomplish a particular purpose”
- Charles Eames

Justification in design refers to aligning text or elements evenly along both left and right edges, creating a clean, structured, and formal block appearance. Commonly used in print, it stretches or compresses word spacing to achieve alignment. While visually neat, it can create uneven spacing (“rivers of white space”) and accessibility issues. This entire paragraph has all lines Justified.

***“There are three responses
to a piece of design...***

Yes, No,

and

wow!

Wow is the one to aim for.”

- Milton Glaser
